

Building a Data-led Foundation to Achieve Success

Organization: Environment Protection Authority, Victoria
Industry: Government
Revenue: N/A
Employees: 700

Mission-critical priority

Build a data-driven culture and become a prevention-focused regulator led by science, data, evidence and intelligence to ensure a healthy environment that supports a livable and prosperous Victoria.

How Gartner helped

The client used:

- **Gartner research and toolkits, particularly the data maturity tool** to help establish a baseline for the organization to measure against in the future and provide initial data literacy
- **Gartner Executive Partner** to provide trusted insights into industry benchmarks, what peers are doing and what areas to focus on to stay ahead of the curve

Outcome

With support from Gartner for Executive Programs, the Chief Data and Insights Officer was able to:

- **Stay inspired and challenged by connecting with peers and Executive Partner** to learn about best practices to deliver better solutions
- **Shape their thinking around how to leverage data better** as part of a wider goal of developing a data and analytics strategy
- **Understand what a good data governance framework looks like** before building their own

“Gartner has helped shape our thinking around how to better manage our data assets and leverage data to drive insights to help us achieve our broader vision.”

John Antony, Chief Data and Insights Officer, Environment Protection Authority, Victoria
