

Safeguard Public Trust

5 steps to cybersecurity
readiness for public
sector leaders

Cybersecurity investments remain a top priority for public sector technology leaders

The 2025 Gartner Government Technology Leader Pulse Survey reveals that in response to geopolitical uncertainty and global disruptions:

80% of global government technology leaders have made cybersecurity a higher priority.

No matter the mission — delivering high-impact citizen services, securing infrastructure, collaborating with private sector security leaders on issues of national importance or protecting the integrity of military operations — boosting cybersecurity investment is just the start. To achieve lasting results, government leaders must align their organization’s cybersecurity strategies, investments and tactics at every level.

Changes in priorities as a result of uncertainty

Percentage of respondents

Significantly decreased Slightly decreased Stayed the same Slightly increased Significantly increased

n = 128 global government technology leaders
Q: How has your prioritization of each of the following technology and data initiatives changed because of the recent shifts in geopolitical stability?
Source: 2025 Gartner Global Government Technology Leader Pulse Survey
Note: Question only asked to respondents who selected “yes” that recent shifts in geopolitical stability were driving changes in prioritization and/or strategy for their organization. Percentages do not add up to 100% due to rounding.

Some of the top questions your peers are asking about cybersecurity readiness:

1 **How** can we effectively assess and improve our current cybersecurity posture?

2 **What** strategies should we adopt to proactively defend against emerging threats and vulnerabilities?

3 **How** can we build a security-conscious culture that meets legal requirements and prioritizes mission outcomes over process?

What are the key stages?

This roadmap provides a consistent approach to cybersecurity strategy planning, highlighting proven techniques public sector technology leaders can use to formalize security program planning and advance organizational mission objectives.

Strategize and plan

Key outcome: Define the security plan and key outcomes.

Establish the foundation by aligning the cybersecurity program with the mission priorities of your organization and the needs of citizens, political leaders and other government stakeholders.

Actions to take:

Understand key mission priorities and define the program’s success in terms of efficiency and effectiveness.

Identify technology and other threat drivers that might interfere/delay implementation and execution.

Document the program’s value, goals and key stakeholders with roles and responsibilities.

Analyst inquiry

- Identify goals and program value. Define key stakeholders with roles and responsibilities.

Strategize and plan

Assess program

Develop strategy

Communicate

Assess, optimize, improve

Assess program

Key outcome: Assess current state and develop a roadmap.

Evaluate the existing security environment, benchmark against other public sector organizations, and create a roadmap to close gaps and advance delivery of improved mission outcomes.

Actions to take:

Assess current processes, tools and technologies, and then conduct vulnerability assessments.

Baseline current maturity, define the target state and perform a gap analysis.

Prioritize projects and allocate resources based on the likelihood of threats/risks and balance against mission objectives.

Develop strategy

Communicate

Assess, optimize, improve

Develop strategy

Key outcome: Develop the cybersecurity strategy.

Develop a comprehensive strategy document that enables initial implementation and positions cybersecurity as vital to advancing mission objectives.

Actions to take:

- Establish** security team roles and responsibilities.
- Identify** stakeholders to be accountable, consulted and informed.
- Develop** critical competencies in cybersecurity; train for desired and missing skills.

Communicate

Key outcome: Communicate and enable stakeholder buy-in.

Work with your organization’s leadership and communications team to implement a communications plan that conveys the value of the program to both internal and external stakeholders.

Actions to take:

Track metrics; seek feedback to assess and improve program effectiveness.

Implement outcome-driven metrics and protection-level agreements to develop a cybersecurity value story.

Tailor training and awareness campaigns to instill a culture of secure employee behavior.

Who needs to be involved?

The most successful public sector organizations establish cross-functional teams for their cybersecurity initiatives. We have outlined the recommended functions to involve and their roles to ensure the best success in hitting the milestones.

Mission-critical team members

Client Story

Environmental Protection Agency (EPA) Ireland Enhances Cybersecurity and Strategic Planning

Mission-critical priority

The CIO sought Gartner expertise to enhance cybersecurity. They needed to streamline ICT strategy and align operations with strategic goals. They also aimed to address sustainability and disaster recovery challenges.

How Gartner helped

Gartner analysis helped EPA Ireland elevate the ISO role and establish a dedicated cybersecurity team, enhancing their security framework with a specific budget. Gartner strategic models enabled EPA Ireland to create a concise, two-page ICT strategy, aligning technological vision with board expectations.

Outcome

By collaborating with Gartner, EPA Ireland **improved its security and reduced threats by 40%**, gained clear strategic direction and executive approval, and proactively addressed challenges such as sustainability and disaster recovery.
