Asia/Pacific Supply Chain Top 10 for 2024

Reflecting the very best in supply chain for 20 years and beyond

Superior supply chains deliver on the business's purpose

They don't just push products; they understand customer value, invest in demand management and promote innovation against ESG. The Gartner Supply Chain Top 10 is a renowned annual ranking of the world's superior supply chains. From financial and corporate social responsibility data and community opinion, we identify, celebrate and profile companies demonstrating excellence in supply chain management. Clients use the peer benchmarks to make the business case for supply chain transformation and the best practices to accelerate supply chain performance.

Introduction

Opportunity is born out of adversity. In today's challenging business era, chief supply chain officers (CSCOs) must drive their organizations to achieve new levels of enterprise growth and efficiency. How do leading supply chains deliver better results for their companies and other stakeholders? They attract and engage supply chain talent by adopting people-centric strategies. They realize supply chain productivity and process transformation through AI-driven advances. And they go beyond supply chain resiliency to achieve competitive advantage.

The leading supply chains featured in the Asia/Pacific Supply Chain Top 10 for 2024 demonstrate excellence in supply chain management amid supply chain risks like military conflict, inflation, climate change and trade wars.

This data is drawn from the Gartner Supply Chain Top 25 for 2024, a global dataset.

Macro trends among this year's supply chain leaders

Attract and engage talent

Gartner Supply Chain Top 25 companies differentiate themselves by consistently funding people-centric strategies. Many of them are using AI to redesign and automate processes to reduce work friction and investing in knowledge management and learning and development (L&D) systems. Their CSCOs understand that redefining the skills, roles, relationships and structures within their organization are critical to driving high performance and engagement.

AI-driven advances

Supply chain organizations are actively assessing the potential of generative AI (GenAI) to improve customer service, planning and manufacturing, but many are struggling to find clear use cases.

Gartner Supply Chain Top 25 companies have built solid foundations in data and digital capabilities. They evaluate both traditional nongenerative AI techniques and GenAI to build practical use cases that benefit most from AI-driven advances.

Antifragile supply chains

Today's volatile, uncertain, complex and ambiguous (VUCA) environment demands that CSCOs embrace uncertainty, learn from it and evolve toward a state called the "antifragile supply chain." Being in the antifragile state helps a complex global supply chain understand how it can achieve its enterprise objectives despite disruption and uncertainty.

Gartner Supply Chain Top 25 companies understand that advancing toward antifragility requires several shifts in decision-making processes, technology, network design and many other elements of strategy.
